

TAKE CONTROL OF YOUR INDEPENDENCE

THE CHALLENGE

As we age we all have the same goals: maintain vitality, continue enjoying activities that we love and preserve independence. Although there are tools that can analyze a senior's risk of falling in assisted living facilities there has never been a solution to gauge "functional independence" in the "independent living" senior population. That is until now...

THE SOLUTION

The new KAMS Independent Living (IL) functional movement screen revolutionizes Senior Care. This patented system is the first of its kind and incorporates state-of-the-art markerless motion capture technology with advanced artificial intelligence and machine learning algorithms.

KAMS IL is the new gold standard in assessing our Senior population and helping them to maintain independence and a great quality of life through aging. With this system we can now have a "functional compass" that gives insights on how we can improve or maintain our function and our quality of life.

THE SCREEN

- Real-time 3D motion capture
- 5-minute assessment
- Analyzes over 250 movement compensations
- Normative comparison
- Functional indexing
- Functional planar joint mapping
- Advanced Reporting
